Guide to Using the Appendices

- The Purpose of these appendices is to provide wherever possible a practical example of what is required to carry out the responsibilities of HSE on Al Khodari Sites.
- Although comprehensive they cannot cover every eventuality and there is no substitute for risk assessments to determine what needs to be done on your site.
- It is hoped that anything that is not covered here and that is identified by you will be sent to be included in this document to help and assist further users.
- Please remember only you can decide on the levels of safety required to carry out your project and it is your responsibility to do so.
- From time to time clients rules may well supersede these because they are better for a given project but these rules will always form the minimum requirements on Al Khodari Sites and Projects.
